

Nishant Routray

+91-8763323038 | Gainesville, Florida | nishant.routray@ufl.edu | [linkedin/nishant-routray](https://www.linkedin.com/in/nishant-routray) 

SKILLS

Languages: C/C++, Java, JavaScript, HTML/CSS, SQL, Linux

Framework/Libraries: React, Redux, Spring Boot, Spring Web, Apache Kafka, JDBC, Node.js, Express, J2EE, Git

EDUCATION

Master of Science: Computer Science

University of Florida, Gainesville

Aug 2023-Jun 2025

Relevant Coursework: Analysis of Algorithms, Advanced Data Structures, Distributed Operating System

Bachelor of Technology: Computer Science

Veer Surendra Sai University of Technology, Burla

CGPA: 8.8/10

July 2016-July 2020

EXPERIENCE

Fullstack Developer

Credit Suisse

Aug 2020 – July 2023

Pune, India

- Member of Regulatory Reporting Services team where I worked in developing the reporting streams for AMER jurisdictions. The role includes development of various micro-services components using **Spring Boot** from rule engine, report generator, reporting engine to health check monitoring which looks into the successful reporting of more than 1M trades/day from upstream to downstream regulators such as DTCC. Involves thorough performance testing in UAT to handle such huge volumes followed by successful deployments into PROD boxes.
- Designing and developing a **React** based UI for the business users where they can monitor the live status and SLA breaches of each trade since go-live. The portal generates various reports everyday according to business requirements. The dashboard uses cache to load the live current day data, which could handle more than 1M trades info and **performance** was much higher as compared to previous portals.
- Developed an archival component which would continuously migrate 2 months older data at EOD from Oracle DB to **SybaseIQ** by considering the partitioning position to maintain the size of the DB and maintain smooth performance. Finally, the Oracle DB was decommissioned post migration saving us **100K CHF**.
- Former part of IB Core Technology, PI Market Data Team where I used **Node.js** and **Express** for backend development and **React** in frontend, with Oracle and InfluxDB integration. Developed an event-driven live web app which can schedule the start/stop of all processes mentioned in the config without logging into the Linux hosts and helps to keep a track of status of the process and control them from UI as well as read log files.

Summer Research Intern

SWAN Lab, Indian Institute of Technology

May 2019 – Dec 2019

Kharagpur, India

- Using Game Theoretic approach, to find a way to have highest packet-delivery with minimum latency and least energy consumption among the nodes in underwater wireless sensor networks. Based on the equations formulated, simulation was doing using NS3 and coded in **C++**.

Digital Marketing Summer Intern

Editsoft Digital - Worked in SEO, Social Media Marketing, Pay Per Click

May 2018 – June 2018

New Delhi, India

PROJECTS

Smart Traffic Management and Accident Detection  | Deep Learning, Image Processing, OpenCV | Analyze the congestion using TensorFlow Count API on the cross-section and efficiently control the traffic signals

Solving Human-Elephant Conflict - Image Recognition and Buzzing Bee Sound  | Cameras detect elephants near susceptible zones and play buzzing sound which prevents them from encroaching human territory

ACHIEVEMENTS AND CERTIFICATION

Solved 100+ Problem in Leet Code 

Branding Head of Global Coding Challenge 2022, Credit Suisse

3rd Prize Winner at UtkalHacks 1.0, 2019 conducted at Ravenshaw University

Finalist of VSSUT Innobuzz Hackathon, 2019

ORACLE Certified JavaEE6 Web Component Developer

Certification from RCPL India on the successful completion of Core and Advanced Java
